

Quick Install Guide

AZPC1

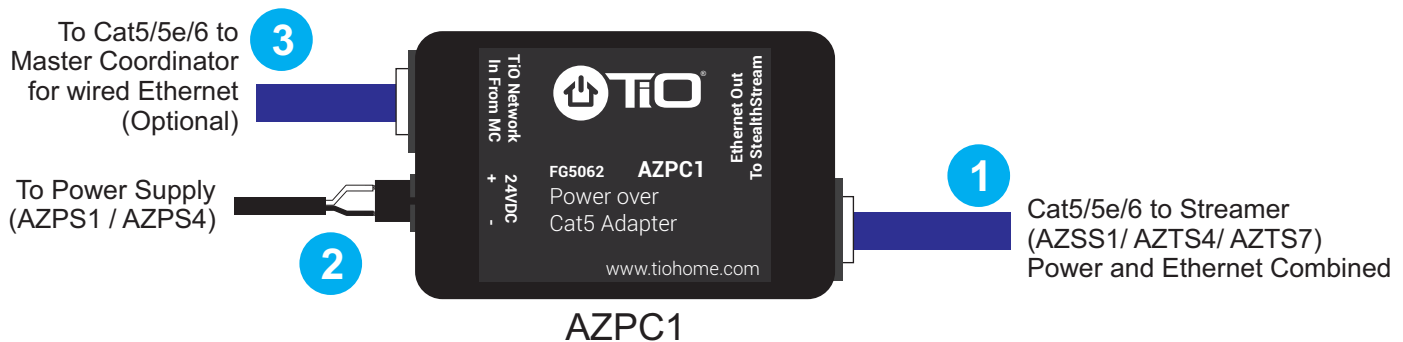

Power over Category Wire Adapter

The AZPC1 (Fg5062) provides the ability to power any TiO StealthStream or TouchStream over Category wiring.

This is an ideal solution when heavier gauge wire (i.e. speaker wire) is not available in the wall box into which the Streamer is being installed.

Installation is Easy:

1. Connect a Cat5 / 5e / 6 wire (via RJ45 connection) from the output of the AZPC1 to the RJ45 Ethernet connection on the back of the Streamer.
2. Connect any TiO Power Supply (AZPS1NA, AZPS1INT or AZPS4) output to the 24VDC terminals on the AZPC1. Make sure the polarity is correct.
3. Connect a Cat 5 / 5e / 6 wire (via RJ45 connection) to the Master Coordinator for wired Ethernet connection to the TiO network. While preferred, this is an optional connection, as the Streamer can connect to the MC wirelessly.

For more information about this and other TiO products, visit our website:
www.tiohome.com

CAUTION: For use with other TiO products only. The AZPC1 is NOT compatible with other PoE (Power over Ethernet) devices. Connection to other products may damage the AZPC1 and/or the other products.

The AZPC1 and other TiO Products are proudly **Manufactured in the USA** by
